Home movies go Hollywood.

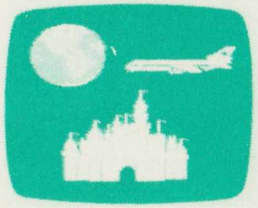
Lights. Camera. Action. Title sequence.
Title sequence? And what's this? Red, yellow and pink balloons scrolling onto the screen? "Happy Birthday Tommy, Love Greg and Marilyn"?

Home movies were never like this.

But then again, that was then. This is now: the Home Video Producer. A powerful yet simple way to personalize your home videos.

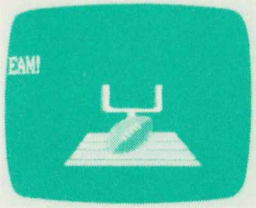
Birthday parties. Holidays. Family vacations. Sporting events. Quite simply, if you've filmed it, now you can develop it. With over 75 snappy full-colour graphics. Eight decorative borders. Ten wonderfully different typefaces in a variety of sizes and colours.

Plus an imaginative assortment of special effects, including wipes in nine directions and scrolls in four directions.



Over 75 full-colour graphics to choose from

Ten different typefaces in a variety of sizes



Watch the text scroll onscreen from any one of four directions

The helmet is 'wiped' onscreen diagonally. In fact, the program includes wipes in 9 directions

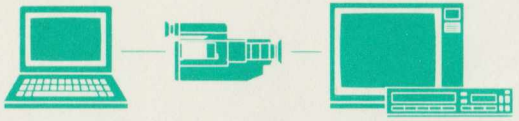
There are ten 'ready-made' video sequences you can personalize. Simply fill in the names, dates, etc., then watch the scene unfold onscreen—the work's been done! (And thanks to the simple icons on the program menu, there are no puzzling keystrokes to memorize).

Or you can create your own extensive sequences, placing graphics, text and borders anywhere on the screen you'd like.

You supply the names and dates. We supply the graphics

Best of all, recording from the Home Video Producer onto videotape is easy. Simply plug your computer into the video-in jack of your camcorder or VCR. Presto. Ready to go.

Whether you're a novice or a budding Spielberg, your home movies can have a Happy Ending (not to mention a jazzy beginning and middle) with the Home Video Producer.



Plug your computer into the video-in jack of your camcorder or VCR and you're ready to record

Hardware Required:

IBM Compatibles require CGA (colour graphics card) with composite Video output, with female RCA type jack. One RCA type phono cable.
Apple II Series requires one RCA type phono cable.

Commodore 64/128 requires one RCA type phono cable with switch box; or video monitor cable.

All three require monitor or TV (colour recommended) and VCR or Camcorder
